Summary

As an Informatics Engineering student with a strong interest in both web development and data science, I am dedicated to building engaging and responsive interfaces, as well as developing analytical and predictive solutions. I am committed to continuously learning and honing my skills in both of these fields, and I am actively seeking mentorship opportunities to accelerate my career development in the technology industry.

Work Experiences

Front-End Developer - PT Solusi Komunikasi Terapan February 2025 – Mei 2025

Tasked with rebuilding the company website after a cyber attack. I successfully developed and launched a new, more secure version to restore operations and prevent future threats.

- Responsible for the frontend development of two websites within a one-week timeframe.
- Performed hosting and server activity monitoring to ensure the smooth operation of both websites.
- Successfully completed the project within one week timeframe.

Laboratory Assistant - Informatics Engineering January 2025 – January 2026

- Taught and mentored one class of students for the "Programming Practicum 1" course.
- Served as a member of the grading team, responsible for evaluating assignments, quizzes, and final projects.
- Assisted students with code debugging and reinforced their understanding of fundamental programming concepts.

Front-End Developer – Naramakna July 2025 – September 2025

- Developed the front-end architecture using **React**, **TypeScript**, and **Vite**, structured around the **Atomic Design** principles.
- Designed and implemented front-end components for article management and display.
- Responsible for implementing core features such as external API integrations with YouTube and TikTok, the comment system, and ad management.

Fullstack Developer – Faculty of Engineering, Pasundan University July 2025 – September 2025

- Developing a university website with a focus on modules.
- Implementing the Whistleblower (Complaint) module, including functionalities for anonymous reporting, complaint category management, and a comment/history system to facilitate interaction between reporters and administrators.
- Designing and building the Asset Management Module for Facilities and Infrastructure (Sarpra), including CRUD (Create, Read, Update, Delete) features for assets, buildings, and rooms.

Front-End Developer – PT Kunci August 2025 – February 2026

- Design and develop a user interface for the Student Gamification module, which includes teacher-managed features.
- Created a front-end component for teachers, allowing them to manage and organize gamification, such as creating missions, awarding points, and tracking student progress.
- Develop an interactive and engaging interface for students so they can view their gamification profiles, achievements, rankings, and learning progress.

Fullstack Developer – PT Titik Terang September 2025 – March 2026

- Delivered 5 web-based projects within 6 months as the sole Fullstack Developer, handling end-to-end development from system architecture design to production deployment.
- Owned the DevOps lifecycle, including server configuration, CI/CD deployment, database management, version control, and ongoing system monitoring and maintenance.
- Collaborated cross-functionally with UI/UX Designers and QA Testers to ensure high-quality, scalable, and user-centered solutions.
- Implemented Scrum methodology, actively participating in sprint planning, daily stand-ups, backlog refinement, development cycles, and sprint retrospectives to ensure timely and iterative delivery.

Project Experiences

Retro Game Hub - E-commerce Platform November 2024 - December 2024

- Developed **responsive user interfaces (UI)** using **Laravel Blade and Tailwind CSS**, integrated with a **Spring Boot RESTful API** for dynamic CRUD functionalities.
- Implemented core *e-commerce* features, including **shopping cart, order history**, and secure **payment processing with Midtrans Snap**.
- Responsible for comprehensive **user authentication** (registration, login, social login, password reset) and **dashboard analytics visualization** by consuming backend APIs.

Project Machine Learning - Bank Customer Churn Prediction Mei 2025 - juny 2025

- Independently developed a Machine Learning model (primarily using Random Forest) to predict bank customers at risk of churn.
- Successfully identified high-risk customers with a precision of approximately 78.69%, enabling targeted resource allocation for retention strategies**.**
- Provided a predictive tool to reduce potential revenue loss and support personalized, targeted retention campaigns.

Project Machine Learning - Scholarship Eligibility Classification Juny 2025 - July 2025

- Developed a machine learning model to predict scholarship eligibility for prospective students, utilizing various student criteria. This project was completed individually.
- Enabled early identification of potential scholarship recipients, significantly streamlining the selection process and improving efficiency in handling large numbers of applications**.**
- Provided insights into key predictive features (e.g., GPA, school origin, extracurricular involvement) to inform future scholarship criteria adjustments.

Education

Pasundan University October 2022 - present

Informatic Engineering **IPK (3.59 / 4.00)**

Organization Experiences

Creative Economy Staff - HMTIF, Pasundan University August 2024 - August 2025

- Served as Project Leader for the **"Seminar Entrepreneurship and Digital Marketing 2025"**, successfully attracting 70+ participants from students.
- Managed and executed the organization's fundraising (danus) program, including product planning, sales strategy, and weekly distribution.
- Achieved consistently strong weekly sales performance, with products frequently reaching sold-out status due to high demand.

Web Curriculum Developer - GDGOC Pasundan University November 2024 - Present

- Served as Project Leader for **Creation Boost**, a weekly web mentoring program attended by 100+ Universitas Pasundan students, aimed at strengthening practical development skills.
- Led **Creation Box**, the culminating appreciation event of Creation Boost, recognizing outstanding student project submissions and top performers.
- Delivered a Study Jam session as a Speaker on **Basic PHP**, attended by 30+ students, focusing on foundational backend development concepts and hands-on implementation.

Intellectual Property

Registered Copyright Holder – Whistleblower System (Computer Program)
Whistleblower (Sexual Violence Prevention and Reporting System for Higher Education)
Directorate General of Intellectual Property, Ministry of Law – Republic of Indonesia
Registration No: 001131074 | February 5, 2026

- Officially registered as Co-Creator and Copyright Holder of a computer program under Indonesian Copyright Law (UU No. 28/2014).
- The system provides an anonymous reporting mechanism and case management module for violence prevention in higher education institutions.

Awards and Skills

Awards

- Jabar Future Leader Regular Scholarship Recipient (2023).

Skills

- Basic Microsoft Office : **Microsoft Word, Microsoft Excel,** and **Microsoft PowerPoint.**
- Programming Language : **PHP, HTML, CSS, JavaScript,** and **Python.**
- Library **: Bootstrap, Tailwind,** and **React.**
- Frameworks : **Laravel** and **Next.**
- Database Management : **MySQL.**
- Tools : **VS Code Github, Unity, Android Studio, Kaggle,** and **Google Collab.**

Speaking and Invitations

- Invited as a Speaker at **Expo Campus and Business World – SMA Negeri 1 Sukaresmi**, representing Jabar Future Leaders Scholarship (JFLS) awardees, sharing academic journey and scholarship insights with high school students.
- Invited as a Guest Speaker on **TIF CAST (Teknik Informatika Podcast)** as a JFLS Scholarship Recipient, discussing academic achievement, leadership experience, and scholarship opportunities.
